

Policy on reducing the health burden associated with tobacco
School of Pharmacy, University of California, San Francisco

WHEREAS, tobacco is the primary known cause of death in the U.S., contributing to the onset and exacerbation of numerous diseases, be it resolved that the School of Pharmacy at the University of California, San Francisco (henceforth referred to as "School," defined as the School administration and faculty) shall:

1. Endorse policies, regulations, and legislation that aim to reduce the public health burden associated with tobacco.
2. Endorse widespread dissemination of evidence-based strategies to prevent the onset of tobacco use, increase tobacco cessation rates, and reduce exposure to second-hand smoke.

FURTHERMORE, because the sale of tobacco products is not consistent with the role of pharmacists as providers of health services or as advocates for public health, and because the sale of tobacco products are in direct violation of the pharmacist's code of ethics, the School shall:

3. Oppose the sale of and use of tobacco products in any facility or establishment where healthcare services are rendered.
4. Endorse policies to eliminate the sale of tobacco products in all pharmacies and stores that contain a pharmacy.
